Yitong Zhang

Embodied AI / Robotics Systems / AI Products

Email: shawn_0318@163.com | Mobile: (+86) 151 5920 8006 | Location: Shenzhen / Hong Kong
Personal homepage: https://shawnzhang0318.github.io/shawn_homepage/ | Product: fundanotes.com

Profile

Engineer working across robotics systems, embodied AI, and AI products, with cross-stack experience in mechanical design, robot action development, systems integration, and full-stack product delivery. Previously worked as a Research Assistant on home-service robotics at the INFIFORCE Shenzhen Research Institute and also served as a Core Research Intern in Assistant Professor Jiayu Chen's Agentic Intelligence Lab at the University of Hong Kong. Currently pursuing an M.Sc. in Artificial Intelligence and Entrepreneurship at HKUST. During undergraduate study, founded the approximately 35-member Navigator Robotics Lab with support from AIRH; the team was originally named 'Shao Xian Cao'.

Research & Technical Interests

Embodied AI & Robot Learning: Natural-language instruction following, action generation, long-horizon planning, and real-robot execution
Robotics Systems: Mechanical design, ROS integration, localization and navigation, field debugging, and multi-sensor systems
AI Products & Agents: AI learning products, contextual Q&A, multi-step workflows, and rapid full-stack implementation

Education

Hong Kong University of Science and Technology — Hong Kong, China
M.Sc. Student in Artificial Intelligence and Entrepreneurship — Aug 2026 - Jun 2028

Beijing Normal-Hong Kong Baptist University (formerly UIC) — Zhuhai, China
B.Sc. in Computer Science and Technology — Sep 2022 - Jun 2026
Top 20% in the major; IELTS 6.5.

Research & Professional Experience

INFIFORCE Shenzhen Research Institute — Shenzhen, China
Research Assistant — May 2026 - Aug 2026
Developed components of a language-to-execution pipeline for home-service robots, including task planning, action-function generation and calls, navigation, and execution feedback.
Built composable action skills for humanoid robots; for example, interpreting a request to turn on a light, navigating to the switch, and completing the physical interaction.

Agentic Intelligence Lab, The University of Hong Kong — Hong Kong
Core Research Intern — May 2026 - Aug 2026
Contribute to research on embodied agents, task planning, and real-robot systems integration.

Youweizhi Education Technology Co., Ltd. — Zhuhai, China
AI Full-stack Engineer — Feb 2026 - Apr 2026
Contributed across the front end and back end of an AI study companion for primary and secondary school students, turning model capabilities into complete learning features.

Robotics Experience

Navigator Robotics Lab — Zhuhai, China
Founder / Mechanical Lead — Nov 2022 - Present
Founded Navigator Robotics Lab with support from AIRH during undergraduate study; the team grew to approximately 35 members and was originally named 'Shao Xian Cao'.
Led mechanical design for the team's first sentry robot, using SolidWorks for component modeling, assembly validation, and material selection.
Completed robot assembly, maintenance, and competition-side debugging while coordinating mechanical, electrical, and software delivery.
Coordinated technical work across mechanical, electrical, and algorithm subteams during system integration.

Selected Projects

FundaNotes - AI Learning Assistant — fundanotes.com
Independent Project / Product & Full-stack Development — 2026
Built for international and joint-program students, combining courseware parsing, OCR, live interpretation, contextual Q&A, smart notes, mind maps, and targeted practice.
Organized multiple AI capabilities into an end-to-end learning workflow from pre-class materials to post-class review, with a local-first data design.

Honors & Awards

First Place, RoboMaster University League Engineering Challenge, Liaoning Regional, Mar 2025
Team Second Prize, RoboMaster University League Guangdong 3v3 and Infantry Challenges, 2024
Provincial Third Prize, CMAU
Provincial Third Prize, China Undergraduate Mathematical Contest in Modeling
Second-class Academic Scholarship

Skills

Robotics & Embodied AI: Python, ROS, task planning, navigation, real-robot execution
Mechanical & Systems: SolidWorks, mechanical design, component modeling and assembly, system debugging
AI & Software: Full-stack development, AI workflows, document understanding, contextual Q&A, Git
Languages: Mandarin Chinese (native), Cantonese, English (IELTS 6.5)
